Depunique (quanepous) Hena 
$$X \in \text{ucb} \in \text{unounwait} \int X \cdot \text{honaba}, \text{and} \int X' \int X(X) dX = \infty$$

$$\partial X = \left\{ \left[ X - EX \right]^2 = \int \left[ X - EX \right]^2 \int X(X) dX$$

$$\int_{-\infty}^{\infty} \int_{-\infty}^{\infty} \left[ X - EX \right]^2 = \int_{-\infty}^{\infty} \left[ X - EX \right]^2 \int_{-\infty}^{\infty} \left[ X - EX \right]^2 = \int_{-\infty}^{\infty} \left[ X - EX \right]^2 \int_{-\infty}^{\infty} \left[ X - EX \right]^2 = \int_{-\infty}^{$$

$$- \partial (x + y) = \partial x + \partial y$$

$$\times 4 y$$

A) Palemenepus pamp.

Depuniques da ach naybane, re  $X \sim U(a,b)$ , and  $\int X(x) = \begin{cases} \frac{1}{b-a} & x \in [a,b] \\ 0 & unare \end{cases}$ 

 $g(x) = \frac{x-a}{b-a} e + \frac{1}{b}(y) = g^{-1}(y) = (b-a)y + a$   $f(y) = \frac{1}{b}(b-a)y + a \cdot (b-a)$ 

$$\begin{array}{l}
X \sim V(a,b) \\
Y = \frac{X-q}{b-a} \sim V(0,1)
\end{array}$$

=> 
$$f y = \frac{1}{6-a} = \frac{1}{6-a} (f x - a) => f x = \frac{6-a}{2} + a = \frac{a+b}{2}$$

$$\partial Y = \frac{1}{(b-a)^2} \mathcal{D}(X-a) = \frac{\partial X}{(b-a)^2} = 7 \mathcal{X} = \frac{1}{12} (6-a)^2$$

$$DX = DX = EX^2 - (EX)^2$$
